

Only \$500

Your Business on the Web!

In 3 easy steps...

1. Choose a Template

The samples of the 4-page websites shown here allow you to choose a "look and feel" for your website that fits your business. You can customize any one of them with your own colors, your own logo and also include your own product or service copy. By using one of our templates, you gain the advantage of a top-drawer, professional-looking website without having to pay top dollar for a designer to create it from scratch. To see full size versions of these, go to www.topstepdesign.com/budgetwebsites.htm

2. Gather your Photos and Information

Use our *Budget Conscious Website Checklist* to help you gather and develop the content necessary to build your site. If you have a special addition or change beyond the template, just ask. Often we can add it in at no additional charge. What about photos? You can supply digital or printed pictures or call about having us shoot some for you. Need help with advertising copy? Let us know. We can help.

3. Approve your Test Site and then Launch!

We will set up a private website location for you to go online and watch as your website is being developed. You will be able to correct and adjust your site and see exactly how it will work online before it is available to the world. Once you are satisfied, we will launch your new website. This complete process often takes less than a week and only costs \$500.

What if you need a domain name, or website hosting?

For an additional \$150, we can register your domain name and host your site for the first full year. You will receive up to 5 personalized email addresses as part of this offer. If you already have someone to provide these services, we can work with them to see that your new website is working flawlessly.

What if you need a more extensive website?

We would be glad to help you develop a much more customized or extensive site. Just call for a free estimate.
